

AI/ML Intern JD - CAW Tech

We are a cutting-edge AI agent firm building intelligent AI products, autonomous agents, and production-ready RAG pipelines. **Our expertise lies in agentic AI systems and fine-tuning LLMs to deliver scalable, real-world solutions.**

We also serve as the core engineering team for multiple fast-growing startups, bringing version-1 SaaS products to life. With every new product, you'll get to explore diverse technologies, architectures, and frameworks—making it an exciting playground for smart, curious builders.

The Role

We're looking for **AI/ML Interns** who are passionate builders. If you've implemented AI agents, fine-tuned LLMs, worked on LangChain, built RAG pipelines, or created innovative AI tools—this is your chance to work on production-ready AI systems that solve real problems.

What You'll Do

- Build autonomous AI agents using LangChain, LangGraph, and similar frameworks
- Develop RAG pipelines with vector DBs like FAISS, Pinecone, or ChromaDB
- Create FastAPI endpoints to expose agent functionality
- Implement Model Context Protocol (MCP) for agent-tool integration
- Optimize prompts, retrieval strategies, and agent workflows
- Contribute to innovation in agentic AI architectures and system design

What We're Looking For (GitHub Required)

- 2–3 well-documented AI agent or ML projects with working code
- Experience with:
 - Python + FastAPI
 - LangChain/LangGraph

AI/ML Intern JD - CAW Tech

- Vector databases and RAG systems
- PyTorch/TensorFlow or Hugging Face Transformers
- Clean code, clear README files, and visible commit history

Bonus Skills

- MCP, AutoGen, CrewAI, or similar frameworks
- LLM fine-tuning (LoRA, QLoRA), memory systems
- Docker, async programming, API integrations

What You'll Learn

- Production-grade agentic AI design patterns
- Advanced RAG strategies and prompt engineering
- Real-world deployment and optimization of AI systems
- Tool orchestration and multi-agent frameworks

How to Apply

- GitHub profile (mandatory)
- 2–3 project links (with live demo if available)
- 200–300 words on your best AI project, what you built, and why it excites you

Duration & Commitment

- **Duration:** 12 months
- **Type:** Full-time Internship & PPO based on performance
- **Location:** In-office, Hyderabad

Why Join Us?

- Work on cutting-edge agentic AI systems
- Learn from and collaborate with expert AI engineers
- Push code to production and shape future tech

AI/ML Intern JD - CAW Tech

- High potential for full-time conversion.

About CAW Studios - [Website](#) | [Location](#) | [Know More](#)

CAW Studios is a Product Engineering Company of 70+ geeks.

We have built these products - [Interakt](#), [CashFlo](#), [KaiPulse](#), and [FastBar](#). And we still run their complete engineering.

We are part of the engineering teams for [Haptik](#), [EmailAnalytics](#), [GrowthZone](#), [Reliance General Insurance](#), and [KWE Logistics](#).

We are obsessed with automation, DevOps, OOPS, and SOLID. We are not into one tech-stack - we are into solving problem.
